PROFESSIONAL SUMMARY

Financial Data Analyst (SAP SAC & SAP BDC Certified) with 2+ years of dedicated engineering corporate planning, financial forecasting, and enterprise data architecture solutions. Proven expertise in leveraging SAP S/4HANA and SAP Analytics Cloud (SAC) alongside modern cloud platforms like Databricks and AWS to build driver-based budgeting engines, rolling cash flow models, and automated data pipelines. Skilled at collaborating with cross-functional finance teams to translate complex accounting requirements into agile cloud analytics, minimize ledger variance, and optimize corporate resource planning.

EDUCATION

Arizona State University

M.S., Business Analytics - Big Data and Supply Chain | GPA: 3.76

Aug 2024 - Dec 2025

Tempe, AZ

CORE TECHNICAL SKILLS

SAP Architecture & Analytics: SAP S/4HANA, SAP Analytics Cloud (SAC) Planning & Stories, SAP BDC (Batch Data Communication), Universal Journal (ACDOCA), Cost/Profit Center Hierarchies, Embedded Analytics, SAP BTP

Data Engineering & Systems Architecture: SQL (PostgreSQL, Snowflake), Python, PySpark, Databricks Delta Lake, AWS Cloud Ecosystem (Glue, S3, Athena, IAM), Medallion Architecture

Financial & Operational Planning: Driver-Based Corporate Budgeting, Rolling Cash Flow Forecasting, Variance Mitigation, Operational KPI Scorecards, Record-to-Report (R2R) Support

Data Integrity & Automation: CI/CD Pipelines (GitHub Actions), Docker Containerization, Automated ETL Validation Frameworks, Cross-Functional Technical Specification Documentation

EXPERIENCE

FINANCE DATA ANALYST

Feb 2025 – Present

KATBOTZ LLC & Datagaps

Herndon, VA

- Architected and maintained structured financial planning models inside SAP Analytics Cloud (SAC) across 6 distinct business units, systematically decreasing manual enterprise reporting cycles.
- Built and maintained planning, budgeting, and reporting models in SAP Analytics Cloud (SAC), reducing reporting cycle time and supporting financial analysis and management reporting across 6 business units
- Consolidated and cleansed massive transactional datasets using SQL, Python, and Databricks, processing 4,500+ global ledger rows spanning 25 service lines mapped back to SAP S/4HANA core architectures.
- Defined strategic corporate financial parameters for revenue margin profiles, multi-tier segment discounts, and deal conversions to create executive analytical scorecards.
- Designed and analyzed an A/B test across 2,000+ users using GA4 and Python, measuring conversion lift and statistical significance and recommending the higher-performing experience.

BUSINESS ANALYST CONSULTANT

Aug 2025 - Dec 2025

Yonder Talent

Tempe, AZ

- Analyzed historical call volume, answer rate, abandonment, average speed of answer, handle time, and agent productivity; established KPI definitions and measurement logic for operational performance and staffing decisions.
- Built regression, SARIMA, XGBoost, Random Forest, and clustering models to forecast staffing demand, achieving 90% peak-period coverage accuracy and supporting short- and long-range resource planning.
- Audited source data and business definitions, identifying duplicate time-period fields, missing operational variables, and inconsistent measures; documented assumptions, limitations, and remediation needs.
- Presented findings, dashboards, and recommendations to business stakeholders and coordinated project activities, priorities, deliverables, and team communication as the primary point of contact.

FINANCIAL PLANNING ANALYST

May 2023 – Jun 2024

CM/s Rama devi & Co

Visakhapatnam, IN

- Engineered an end-to-end driver-based budgeting engine in SAP Analytics Cloud (SAC) directly integrated with SAP S/4HANA (ACDOCA Universal Journal) ledger objects, minimizing forecasting variance from $\pm 6\%$ to $\pm 3\%$.
- Co-steered data pipeline automation transformations alongside core database engineers, using PySpark ETL streams to transition ledger records into Databricks Delta Lake, driving a 15% expansion in data accessibility across 120+ internal stakeholders.
- Executed targeted corporate cost-centre hierarchy audits utilizing Databricks SQL scripts, identifying redundant outlays to reduce operational overhead within labour categories by 4%.
- Constructed an automated 13-week liquid asset forecasting mechanism inside AWS S3 and Databricks environments, lowering quarter-over-quarter accounting variances by 18%.

PROJECTS

LIFE SCIENCES CLAIMS RISK ANALYTICS PIPELINE (PYTHON, SQL, AUTOMATION) | [GitHub](#)

- Designed a reproducible 5-stage Python pipeline with SQLite-based analytics to automate hospital performance, patient risk, and cost-trend tracking from healthcare claims data, running 4 analytical queries with Docker containerization and GitHub Actions CI/CD.
- Built a data-quality validation framework detecting missing values, duplicate IDs, and negative costs across 20 patient/claim records, ensuring 100% data integrity before analytics execution.
- Developed SQL analytics identifying 4 hospital-level KPIs (total claims, avg cost, length of stay, readmission rate), enabling cross-facility performance benchmarking and outlier detection.

LIFE SCIENCES CLAIMS PREDICTIVE ANALYTICS PIPELINE (AWS, PYSPARK, MODELING) | [GitHub](#)

- Engineered an end-to-end medallion pipeline on AWS (Glue, PySpark) to identify high-cost claims, fraud patterns, and provider performance, joining 4 source tables across 11,210 claims with Unity Catalog governance.
- Designed a 4-table star schema (1 fact, 3-dimension tables) and built PySpark ETL transforming raw CSV into enriched Parquet and 6 Gold-layer KPI tables covering high-cost claims, provider performance, fraud indicators, and patient risk scores.
- Cataloged all 10 tables in AWS Glue Data Catalog and enabled SQL querying via Amazon Athena, reducing time-to-insight for case management, fraud detection, and network-optimization stakeholders.
- Identified \$88.9M in cancer treatment costs, flagged 229 high-fraud-risk claims, and risk-stratified 646 patients (64.6%) as High or Critical priority for case management interventions.
